

# Blinkit Sales Performance & Customer Behavior Analysis

Turning raw retail data into actionable business intelligence

SQL

EXCEL

POWER BI

QUICK COMMERCE ANALYTICS

# Project Objective

## What We Set Out to Understand

- **Sales Performance**  
Across categories, outlets & locations
- **Customer Behavior**  
Purchasing patterns & preferences
- **Inventory Efficiency**  
Distribution gaps & stock optimization
- **Growth Opportunities**  
Revenue & satisfaction improvements

# Tools & Technologies

## SQL

Data extraction, cleaning & aggregation

## Power BI

Interactive dashboard & visualizations

## Excel

Initial data cleaning & validation

## DAX

KPIs & calculated measures

# Dataset at a Glance

~3.5K

**Total Transactions**

Approximate transaction volume analyzed

6+

**Data Features**

Category, Sales, Outlet, Tier, Fat Content, Ratings

3

**City Tiers**

Tier 1, 2 & 3 locations covered

4.2

**Avg. Rating**

Customer satisfaction score (out of 5)

# Sales Performance Insights

## Where Revenue Is Concentrated

### Tier 3 Leads

Highest overall sales volume — strong demand in smaller cities

### Medium Outlets Win

Best balance of revenue & customer reach

### Category Concentration

Few categories drive majority of sales

# Product Category Breakdown

## FMCG Dominates

Fruits, snacks & household essentials drive the bulk of revenue. Health & Wellness and Frozen items remain underperforming — a clear opportunity for targeted promotions.

**Opportunity:** Boost low-performing categories with bundled offers & visibility campaigns.

# Customer Behavior Patterns

## Price-Sensitive

Strong preference for low-fat, affordable products over premium options

## Repeat Buyers

High repeat purchase frequency in daily essential items

## Moderate Satisfaction

Ratings cluster in 4.0–4.5 range — room to improve experience

# Outlet & Location Analysis

## Location & Size Drive Results

-  **Tier 3 = Volume Leader**  
Largest customer base, highest total sales
-  **Tier 1 = High Value**  
Fewer transactions, but higher spend per order
-  **Medium Outlets = Best ROI**  
Most profitable outlet format overall

# Inventory Distribution Insights

Inventory imbalance — overstocking in slow categories and understocking in high-demand ones — is costing efficiency. Demand forecasting based on historical trends is the clear path forward.

# Key Takeaways & Recommendations

## Actionable Next Steps

01

### Stock High-Demand Products

Prioritize FMCG & essentials

02

### Promote Weak Categories

Health & Frozen need campaigns

03

### Invest in Tier 3

Expand medium-sized outlets

04

### Improve Forecasting

Use historical data for inventory planning
